How we work to nourish the world

We are a family company providing food, ingredients, agricultural solutions and industrial products to nourish the world in a safe, responsible and sustainable way.

We connect farmers with markets so they can prosper. We connect customers with ingredients so they can make meals people love. And we connect families with daily essentials – from eggs to edible oils, salt to skincare, feed to flooring.

By providing customers with products that are vital for living, we help businesses grow, communities prosper, and consumer live well in their daily lives.

We lead with our values

As we envision the future we can create together, we look to the values that have steered us from the start. We put people first. We reach higher. We do the right thing.

Cargill's impact in China

Growing with China

Cargill's purpose – in China and globally – is to nourish the world in a safe, responsible, and sustainable way. With operations in 70 countries and supply chains that reach 125 markets around the world, Cargill has earned the trust and partnership of global leaders, businesses, customers, and farmers and ranchers in every region.

China, home to more than 1.4 billion people representing 17% of the world's population, is a critical market for Cargill. For more than five decades, we have operated here powered by the seamless integration of global technology and local insight, actively addressing contemporary challenges in nutrition, health, and sustainability while developing innovative solutions tailored to Chinese consumers and customers.

In China's agri-food sector, we support the advancement of healthy consumption and drive intelligent, high-quality development of livestock farming. Beyond these foundations, we are expanding our innovation and sustainable development practices into diverse industries including maritime, beauty care, bioindustry, metals, and risk management.

In 2025 alone, Cargill invested more than $500 million to strengthen supply chain capabilities in China

Leading with innovation

At Cargill, innovation is about more than just new ideas. It's about using insights to anticipate our customers' needs and create novel solutions that deliver value to our customers and Cargill. Our team in China is an integral part of our global innovation efforts, developing new solutions that drive results for our customers and help to transform food and agriculture.

As the world's largest food consumer and importer, China's rising demand for diverse, nutritious, and environmentally friendly food creates opportunities for Cargill's sustainable solutions. To meet that demand, we operate two global innovation centers in Shanghai and Beijing, a new Animal Nutrition & Health Global Innovation Center in Shanxi, serving the Asian and Chinese swine market, and a R&D center in Pinghu, focusing on coffee and tea beverages. Shanghai also hosts Cargill's Beauty Applications Center for the Asia-Pacific region. These local centers are integral to Cargill's global R&D network, allowing us to combine global expertise with local insights to serve the Chinese market and customers, and across the Asia-Pacific region.

In FY2025, Cargill employees contributed more than 5,500 volunteer hours in communities across China.

Investing in our communities

Cargill has a long history of supporting partnerships that advance social and environmental priorities in China and around the world.

In China, we empower local farmers with trainings that boost yields, raise incomes, and promote sustainable agriculture practices. Our partnership with the World Food Programme in Songyuan, Jilin, applies insurance and futures products and integrated water-fertilizer management to strengthen corn growers' resilience against climate and market volatility.

In FY2025, our employees in 30+ locations across China contributed more than 5,500 volunteer hours – part of the 77,000 hours Cargill employees gave globally to their communities.
